

- 1) *Students* table name being left blank (undefined).
 - Expected output: An error occurs that declares the table name “students” does not exist when called later in the program.
 - Actual output: An error was thrown that declared no such table “students” existed. This was declared on a line after the students table was created.
- 2) Deleting *course_id* attribute from course table, where it was created.
 - Expected output: An error occurs that declares the column name *course_id* does not exist when called later in the program.
 - Actual output: An error was thrown that declared no such column *course_id* existed. This caused another error that declared no table *courses* existed. Since an attribute was missing, the table was unable to be listed in task 3.
- 3) Missing a semicolon after the last value inserted into the distribution table
 - Expected output: A syntax error occurs that is expecting the missing semicolon.
 - Actual output: A syntax error occurred expecting the missing semicolon. Another error occurred where calculations were unable to be performed for tasks 11 and 12.
